

DPX Cabinet Doors and Side Panels

Front and rear doors are supplied with standard cam locks with a pull handle. All doors are reversible and can be mounted with a left or right side hinge.

The mesh door features 79% open area, the most that anyone can offer in allowing for air flow over servers.

Doors with fan cut-outs help draw hot air out through the rear of the cabinet. In this way the hot aisle cool aisle configuration can be easily achieved.

Dual doors are also available.

Available door options include solid steel, mesh steel, Plexiglas, fan holes and louvered doors. Add the appropriate suffix to the part number. e.x: SMDPX86-24LD
