

Network Accessible CDU Firmware
Monitor and control your data center power more efficiently with intelligent CDUs (Smart & Switched).

1 Basic CDUs

Reliable power distribution with branch circuit protection for all the devices in your equipment cabinet. Learn more: <http://www.servertech.com/products/basic-pdus/>

2 Metered CDUs

Manage power capacity and prevent circuit overloads with local input current monitoring. LED digital display indicator provides an accurate, real-time reading of the aggregate power load in amps on each power circuit in the rack. Learn more: <http://www.servertech.com/products/metered-pdus/>

3 Smart CDUs

Provide reliable power distribution combined with local and network power and environmental monitoring. Use the network interface to view CDU statistics via web browser, and receive SNMP based or email alerts if problems arise. Learn more: <http://www.servertech.com/products/smart-pdus/>

4 Switched CDUs

Combine remote configuration and management with power distribution and power and environmental monitoring. Reboot a single or dual-power server with one command. Receive SNMP-based alerts and email alerts when power or environmental conditions exceed thresholds. Assign users specific access rights to designated outlets or groups. Learn more: <http://www.servertech.com/products/switched-pdus/>

5 Smart POPS CDUs

Blade servers and high density computing power requirements continue to increase, creating heat and capacity challenges for managing the IT environment. Make smart decisions about your data center power. Smart POPS (Per Outlet Power Sensing) CDUs™ track outlet level power and environmental information, providing the most granular and accurate level of measurement. Learn more: <http://www.servertech.com/products/smart-pops-per-outlet-power-sensing/>

Switched POPS CDUs

Per Outlet Power Sensing functionality provides the most accurate and granular power and environmental information, with on/off/reboot capabilities by outlet or group. Learn more: <http://www.servertech.com/products/pops-per-outlet-power-sensing/>

Smart Power Monitors

Manage your power capacity, load and redundancy. Smart Power Monitors easily add input current load or power monitoring to any existing cabinet via web interface or serial connection. Learn more: <http://www.servertech.com/products/smart-pdus/>

Sentry Power Manager (SPM)

The ultimate solution to measure, monitor, control and trend your data center power. Manage your entire CDU network globally. Learn more: <http://www.servertech.com/products/sentry-power-manager/>

Remote Power Management

Improve uptime. Manage your data center power and IT equipment remotely. Server Technology's SPM (<http://www.servertech.com/products/sentry-power-manager/>) combined with our intelligent cabinet power distribution units (<http://www.servertech.com/products>) are the complete solution to manage power in your data centers and remote locations.

Services & support

From training, product integration and installation to our 24x7 technical support, our power experts are ready to help you manage your data center power challenges and product questions. Learn more: <http://www.servertech.com/Support/>
